

Office Fit-out

Client:	DST Output
Project:	Efficient Electrical Fit-out of new print lab and IT office
Value:	Undisclosed
Programme:	3 Months

Client's requirements

DST helps businesses engage with their customers, deliver relevant messages and content, and work more efficiently.

Combining creativity and the latest technology, they print and mail 3 million items daily, and send countless e-communications, for some of the UK's best known brands

Due to recent growth, and an increase in orders, DST required an expansion to one of their Peterborough printing labs to accommodate two new state of the art machines. On top of this they also needed to increase the capacity of their IT suite with an extension and refurb of the existing office.

KA Wing's contribution

KA Wing facilitated the client's vision of creating a modern, state of the art office and lab. Prior to contract award they produced a tender design and worked with the client at every stage to develop it to meet the needs of each of the internal stakeholders. The end result is a top class facility that provides modular power, data and lighting which will allow flexible use for years to come.

Making the difference

After originally tendering the works as a traditional fluorescent project it became clear that DST were looking for a greener, more energy efficient solution. However the combination of OPEX and CAPEX had to balance for the solution to be viable.

The K A Wing Group are specialists in the field of office fit-out and took on the challenge. Initially they calculated the relative efficiency of the proposed solution and compared this to various low energy alternatives. They also value engineered the original design, to take account of low usage areas, where fitting quantities could be reduced.

Following negotiations with leading Peterborough wholesalers KA Wing were able to offer DST a low cost LED solution that would satisfy the commercial requirements, whilst at the same time deliver energy savings, a longer lasting product as well as markedly improving the aesthetics.
