BECAUSE GOOD TASTE IS ALWAYS A QUESTION OF PACKAGING

ABOUT BAGS, VALVES & FRESH COFFEE

The requirements for the optimum coffee packaging are actually quite simple: protection against light & protection against oxygen. However ...

... unfortunately, coffee is not just any old product, it is a highly sensitive natural product which can only develop its qualities if the packaging not only protects its valuable taste against damaging outside influences but also allows the coffee to develop.

Just one of the many reasons why the innovative WEBAbag barrier bag with its patented one-way degassing valve is becoming ever more popular with roasting plants and consumers.

And WEBAbags have more to offer – take a look inside!

GOOD TASTE SEEKS GOOD HOME

Whether low, medium or high barrier, WEBABag packages mean you can be certain to have the best packaging to suit your every need

Freshly roasted coffee

From the roaster to the bag. Our side gusset foil bags with degassing valve offer the optimum protection for coffee and all products with high sensitivity to vapor and oxygen.

PAGE 10/11
SIDE GUSSET FOIL BAG

Delicious cocoa

From the tree to the bag. The pleasant non-slip surface and the natural look of our side gusset bags of natural kraft paper have made them the preferred packaging material not only for lovers of cocoa.

PAGE 18

PAPER TIN-TIE BAGS

Crunchy biscuits

From the oven to the bag. See what you get, and taste what inspired the baker. Our side gusset bags with windows keep you in the picture.

PAGE 19

PAPER WINDOW BAGS

Aromatic tea

From the tea drier to the bag. Our favorite tea packaging. And no wonder because stand-up pouches made of rice paper are not simply classy to look at but are a pleasure to touch.

Biotrē® Film

PBi, the manufacturer spent over two years developing Biotrē Film, a biodegradable and heat sealable barrier material. PBi conducted extensive composting and cupping tests with industry leaders to verify that Biotrē, in fact, biodegrades while protecting products in the same way that a standard plastic/foil laminate material does.

How does it work?

A standard plastic/foil laminate is made from 100% non-renewable resources and is not considered biodegradable. Biotrē Film is made from 60% (by weight) renewable wood pulp and is biodegradable. Based on previous tests, biodegradation will take on average several months in a backyard composter.

The remaining 40% (by weight) of Biotrē Film is plastic with an additive that is designed to make it breakdown over five to ten years. This portion of the material can be removed easily from a composter and disposed. Its accelerated degradation time allows it to have a significantly reduced impact on the waste stream.

With the help of some of our coffee roaster friends, we have verified that Biotrē effectively preserves and protects sensitive products like coffee. In this way, we are able to meet our allied goals of bringing value to the table, providing a more sustainable package, and making the world a better place.

Biotrē® Natural Kraft Bags

- Biodegradable, heat sealable, barrier material
- Effectively preserves and protects sensitive products like coffee

Block Bottom Bag

Weber Packaging is proud to introduce a brand new bag format. In the world of packaging, there are many ways to stand out.

The Block Bottom Bag makes a statement.

It combines the benefits of a traditional side gusseted bag and stand-up pouch, and rolls it into a package that sits narrow on the shelf, doesn't tip over and squares up like a box.

Benefits

- Open top for easy filling
- Stands up easily
- Crisp corner seals
- Wide panels for graphics
- Stable on shelf

All dimensions:
width x depth x height

Stand-Up Pouches

Jump in with today's hottest packaging format. These pouches stand on their own, provide wide faces to promote your product and sport consumer friendly zippers. Stand-Up Pouches are great for many food and snack products such as coffee, crackers, cookies, nuts, pet food, powders, etc. Constructed of clear and foil laminates, our Stand-Up Pouches protect your product from oxygen, light and moisture. Zip-seal locks are standard on most of our Stand-Up Pouches.

Crystal Clear Pac

»Crystal Clear« to display and show off your product! Crystal Clear Pac is a package that is »crystal clear«. Crystal Clear Pacs are great for treats, chocolate covered espresso beans, snacks, other specialty foods and niche products. Our Crystal Clear Pac comes in five sizes, including stand-up pouches, and flat pouches with a zipper for reclosure, plus a convenient hang hole.

Crystal Pac is:

- »Crystal Clear« – no more »murky« poly bags
- Durable – the two-ply lamination ensures structural strength
- Retail Friendly with a zipper for reclosure and a hang hole

All dimensions:
width x depth x height

Custom Packaging

For over three decades Weber Packaging has been creating new projects with individual printing in a wide variety of packaging solutions.

Our aim is to deliver you high quality packaging with your custom print exactly according to your instructions.

MINIMUMS, ADDITIONAL COSTS AND REQUIREMENTS:

- **DESIGN:** All custom printed projects start with a design, and rates for designers can vary greatly. Design services are an additional cost beyond the cost of the package.

We can work with your designer and we offer full design services. For our design service our project coordinators collaborate with a design studio. We can help update your ready made art, clean up existing art files, or create brand new art for you.

- **REQUIREMENTS:** We will guide you (or your designer) through our Art Requirements with step-by-step instructions that specify art submission criteria to a size specific template/die line for the design.
- **CYLINDERS/PLATES:** Custom printing has set up charges for the artwork based on color count, and complexity of the design. Each color requires a cylinder or plate and design changes cost money. We offer competitive rates for cylinder charges and we help with production design.
- **MINIMUMS:** Custom printing quantities vary based on the printing substrate being used and total square inches. For example, printed tin cans typically start at 5,000 pieces, whereas a 12-16 oz coffee bag requires 20,000 pieces. Contact our Sales/Service Group for minimums on the size/style of your package.

LET OUR SALES TEAM HELP YOU
MOVE TO CUSTOM PRINTED PACKAGING.

Stock Bag Custom Services

Simple and effective ways to make packaging easier.

TIN-TIE APPLICATION

You can take a step out of your in-house production, save time and money, and get a consistent tin-tie placement. By letting us apply your tin-ties, you can select where you would like it placed and the bags will arrive to you, ready to be labeled and filled. Give us a call to find out more about this service. Additional costs apply.

SPECIAL VALVE PLACEMENT

Need to put a valve in a different spot on a stock bag?
Pre-order your stock bags without a valve and specify where you would like the valve on the bag. We can do special valve placements with minimum quantity requirements, giving you more flexibility.

One case minimum-additional costs apply.

LABEL APPLICATION SERVICES

Decrease in-house production time and get a consistently applied label. Labels are a great way to call attention to your product and enhance the overall appearance of your package. Our labeling service is simple, with low minimum order quantities. You provide the labels and we apply them to your packaging and deliver the finished product to your door. Give us a call to get our Label Application Guidelines and let us help you get started.

Manual Portable Heat Sealer Type 150 C-2

For PP,PE and thin Laminates. Ideal for manual sealing.

- can be combined with a foot pedal
- 3 Heating Levels available:
low heat (for thin foils), one Claw heated, both Claws heated

WEBAseal Heat Sealer "Lamino"

Possibility to be operated by foot pedal. Allows operating person to use both hands for handling the product.

The profiled sealing bars apply high pressure to seal different kinds of laminated bags e.g.: paper, aluminium, PP and cellophane.

Electronic temperature controller (digital) with a temperature range from 50°C to 150°C (+/- 1%).

Possibility of automatic mode (timer controlled).

The pressure on the sealing jaws is produced by an electromagnet, which does not require pressurized air.
