

PLASTWOOD

PLASTWOOD

PLASTWOOD or Closed-cell PVC foam board is a light-weight rigid material used primarily in the manufacture of sign and displays. It is considered robust for outdoor use, being immune to rain and resistant to wind and sunlight. PVC foam board is distinct from the extra light weight foam core board, laminated of foam and card surfaces, used for indoor signage and modeling.

Size : 4x8ft

Color : white

Thickness : 1mm - 25mm.

PROPERTIES

- solid and has a very rigid structure.
- very light (as little as half the weight of solid PVC)
- highly resistant to moisture and some chemicals
- and very easy to cut and shape. It also has thermoplastic properties
- can be cut as easily as wood softened and shaped by immersing in boiling water or with a standard heat gun
- painted with standard automobile paints

USAGE

- Interior design / furniture
- Booth and exhibition
- shelf / display / P.O.P
- Gift / premium
- Signage
- Product model
