

### LP 3

Readymade mortar **LP 3** is a liquid additive supplied to factories as an additive for manufacturing high quality ready to use cement plaster. With the help of readymade mortar **LP 3** the plaster reaches the building site ready for use. The properties of the wet plaster are retained in the storage containers on the building site for a period of four working days. The plaster starts working immediately on contact with the wall. Its application is identical to that for regular plaster, using the same tools. It may also be sprayed using a suitable pump. Plaster with readymade mortar **LP 3** is suitable for plastering on concrete, concrete blocks and autoclave prepared blocks (ITONG).

#### Advantages of plaster containing readymade mortar LP 3

- Ready for use.
- Easy and convenient to use with conventional methods.
- Homogenous and lump free.
- Does not crack.
- Good adhesion to infrastructure.
- Zero wastage.
- Significant manpower savings.

#### Dosage

- 5 lt/m<sup>3</sup>

#### Density

- 1.13

#### packing

- 200 lt , 1000 lt
